

SYSTEM FOUNDRY / BUSINESS MVP

ScopeSeal

A local-first change-request ledger that turns revision scope into visible approval and billing decisions.

PRODUCT STATUS	AUTOMATED TESTS	MONTHLY PRICE
PASS	8 / 8	KRW 24K
Implemented and verified	Zero failures	Per studio

01 / PROJECT OVERVIEW

Project overview

ScopeSeal gives small creative studios a single ledger for revision requests. It compares every request with the contracted revision allowance, calculates a transparent additional-charge estimate, and records approval status before work begins.

02 / TARGET CUSTOMER

Target customer

Two-to-ten-person web, design, and video studios, plus freelancer teams that receive client revisions through email and messengers but do not need a full project-management suite.

03 / PROBLEM

Problem

Revision requests are easy to start and hard to bill when contract scope, remaining rounds, effort, and approval live in different places. Studios absorb unplanned work or create client friction with late, unsupported invoices.

PRODUCT

Three focused jobs

04 / CORE FEATURES

Core features

The MVP implements one complete scope-control loop:

01	Validated contract and request intake Store project alias, revision allowance, hourly rate, scope flag, effort, and request date.
02	Automatic allowance and fee classification Use included rounds in sequence, then estimate exhausted or out-of-scope work at the contract rate.
03	Approval-status tracking Move requests through review, quote sent, approved, and complete while keeping billable totals visible.

05 / HOW TO USE

How to use

Set the contract baseline, then register each client request before work starts. Review the automatic included-or-billable label and fee estimate, send the quote if necessary, and update the request status after the client responds.

06 / SYSTEM ARCHITECTURE

System architecture

A static browser application loads a pure validation and classification module, renders the ledger, and saves project data in localStorage. There is no account server, database, or external data transfer.

Browser UI	Scope module	Local storage	Node tests
HTML + CSS	Rules + validation	Device-only data	Pure functions

07 / TECHNOLOGY

Technology

Static HTML, responsive CSS, vanilla JavaScript, localStorage, and the built-in Node.js test runner. Runtime dependency count: zero. Paid API count: zero.

VALIDATED INTERFACE

Actual running screen

Captured from headless Chromium after a new 1.5-hour revision request was validated and classified.

The screenshot shows the 'Orbit Brand Refresh' project control desk. At the top, there's a header with the ScopeSeal logo and a 'SCOPE SEALED' badge. Below the header, a summary section displays key metrics: 4 open requests, 0 allowance left, and an estimated additional charge of ₩570,000. The main area is divided into two panels. The left panel, 'REVISION LEDGER', lists five requests with their status, dates, times, and estimated costs. The right panel, 'NEW REQUEST', shows a form for adding a new request, including fields for request title, content, category, and time, along with a 'REQUEST SUBMIT' button. A 'LOCAL FIRST' notice is at the bottom right.

Request Type	Date	Time	Request Description	Estimated Cost	Status	Action
추가 청구 (Add Request)	2026-08-03	1.5시간 예상	푸터 문구 수정 변경 범위를 구체적으로 기록	₩90,000	검토 전	저장
추가 청구 (Add Request)	2026-08-03	2시간 예상	SNS 배너 2 정사각형과 세로형 프로모션 배너	₩120,000	검토 전	저장
추가 청구 (Add Request)	2026-08-01	6시간 예상	추가 랜딩 페이지 신제품 캠페인을 신규 페이지 제작	₩360,000	검토 전달	저장
계약 포함 (Contract Included)	2026-08-01	1시간 예상	모바일 여백 수정 상세 페이지 모바일 간격 정리	포함	승인	저장
계약 포함 (Contract Included)	2026-07-30	2시간 예상	메인 비주얼 교체 첫 화면 제품 이미지와 카피 조정	포함	완료	저장

08 / RUNNING SCREEN

Running screen

The verified screen shows four open requests, zero included rounds remaining, KRW 570,000 in estimated additional charges, and three requests awaiting approval. The new request was classified as allowance exhausted with a KRW 90,000 estimate; changing its status to approved reduced the approval queue to two.

VERIFICATION

Evidence, not assumptions

09 / TEST RESULTS

Test results

All required checks were executed against the generated project.

Check	Result	Evidence
Dependency installation	PASS	npm install completed; zero runtime dependencies
Application start	PASS	Local HTTP server returned status 200
Core workflow	PASS	Fee changed KRW 480K to 570K; approvals changed 3 to 2
Automated tests	8 / 8	Validation, allowance order, fees, status updates
README commands	PASS	Install, test, and start commands executed
Credential scan	PASS	No secret patterns and no .env file
PDF	PASS	Generated, parsed, rendered, visually inspected

10 / SECURITY AND LIMITATIONS

Security and limitations

ScopeSeal sends no data to external services. Text, number, date, and enumerated values are validated; displayed user text is HTML-escaped; no credentials are required. Use client aliases because device-local data is unencrypted. Storage clearing causes data loss, there is no multi-user audit trail, and fee estimates require confirmation against the signed contract. ScopeSeal is an operations aid, not legal advice or an invoice system.

GO TO MARKET

Sell clarity before complexity

11 / PRICING AND REVENUE MODEL

Pricing and revenue model

Charge KRW 24,000 per studio per month for the local-first MVP, including unlimited local projects and updates. A later team tier can add encrypted sync and approval links at KRW 59,000 per month, but no paid service is required by this version.

12 / FIRST CUSTOMER ACQUISITION

First customer acquisition

Recruit ten studios from Korean freelance design and video-production communities. Offer a 14-day pilot on one active client project, then compare untracked revision hours and time-to-approval with the prior messenger workflow. Convert with a reusable change-order summary and evidence of avoided unpaid work.

13 / IMPROVEMENT PLAN

Improvement plan

Priorities after observing real client revisions:

- JSON backup and restore for device migration.
- Exportable approval summary and change-order PDF.
- Multiple projects with archived contract baselines.
- Authenticated encrypted team sync only after multi-user demand is proven.

COMMERCIAL ASSUMPTION

ScopeSeal should stay narrower than full project management. Its value is making the moment between client request and studio work commercially explicit.

ASSESSMENT

Overall evaluation

14 / OVERALL SCORE

Overall score

Six dimensions are scored out of 10. A higher maintenance score means easier maintenance.

Dimension	Score	Rationale
Customer problem strength	9/10	Unpaid scope creep directly reduces studio margin and recurs across projects.
One-day completeness	9/10	The full request, fee, and approval loop is implemented and browser-tested.
Sales potential	8/10	Clear financial value supports a small monthly price; interviews remain necessary.
Maintenance difficulty	9/10	Zero runtime dependencies and no backend keep maintenance light.
Differentiation	7/10	Scope-first calculations are focused, though adjacent PM tools exist.
Scalability	8/10	Exports, multiple projects, approval links, and team sync create expansion paths.

OVERALL

8.3 / 10

Proceed to a ten-studio pilot and measure unpaid hours avoided.

Verdict: technically complete and commercially focused for a business MVP. The next evidence is whether studios consistently log requests before starting work and recover measurable revision revenue.
