

SYSTEM FOUNDRY / BUSINESS MVP

QuoteLoop

A local-first follow-up queue that keeps sent quotes visible until a decision is recorded.

PRODUCT STATUS	AUTOMATED TESTS	MONTHLY PRICE
PASS	8 / 8	KRW 17K
Implemented and verified	Zero failures	Per business

01 / PROJECT OVERVIEW

Project overview

QuoteLoop gives a small service business one place to register sent quotes, see which prospect needs a follow-up today, and measure open, weighted, and won pipeline value. It deliberately avoids becoming a full CRM.

02 / TARGET CUSTOMER

Target customer

Solo operators and teams of two to ten selling photography, video, design, cleaning, repair, or other quote-based services without a dedicated sales system.

03 / PROBLEM

Problem

Quotes often leave the operator's attention after email delivery. Spreadsheet rows do not surface urgency, and generic task tools do not connect the next contact date to potential revenue, so promising work quietly goes cold.

PRODUCT

Three focused jobs

04 / CORE FEATURES

Core features

The MVP implements a complete quote follow-up loop:

01	Validated quote intake Capture an anonymous client alias, service, amount, probability, status, and follow-up date with strict limits.
02	Urgency queue Order overdue, today, upcoming, and closed quotes so the next useful action stays visible.
03	Weighted pipeline tracking Calculate open value, probability-weighted value, overdue count, and won revenue as status changes.

05 / HOW TO USE

How to use

After sending a quote, register it with a non-identifying client alias and choose the next contact date. Work down the queue from overdue to later. When the customer decides, change the status to won or lost so open and won totals update immediately.

06 / SYSTEM ARCHITECTURE

System architecture

A static browser UI calls pure validation, urgency, and aggregation functions. State is saved only in localStorage. The same pure module is exercised by Node tests; no server, account, database, analytics, or external API exists.

Browser UI	Pipeline module	Local storage	Node tests
HTML + CSS	Rules + totals	Device-only data	Pure functions

07 / TECHNOLOGY

Technology

Static HTML, responsive CSS, vanilla JavaScript, localStorage, bundled Noto Sans KR fonts, and the built-in Node.js test runner. Runtime dependencies: zero. Paid APIs: zero.

VALIDATED INTERFACE

Actual running screen

Captured from headless Chromium after a new showroom quote was validated and added.

08 / RUNNING SCREEN

Running screen

The verified screen shows four open quotes, one overdue follow-up, KRW 6.66M open value, and KRW 4.17M weighted pipeline after adding a KRW 1.5M showroom quote. Marking it won returned open totals to their starting values and raised won revenue to KRW 2.7M.

VERIFICATION

Evidence, not assumptions

09 / TEST RESULTS

Test results

Every required check was executed against the generated project.

Check	Result	Evidence
Dependency installation	PASS	npm install completed; zero runtime dependencies
Application start	PASS	README HTTP server returned status 200
Core workflow	PASS	Open 3 to 4 to 3; weighted KRW 3.42M to 4.17M
Automated tests	8 / 8	Validation, urgency, totals, status transitions
README commands	PASS	Install, test, and start commands executed
Credential scan	PASS	No secret patterns and no .env file
PDF	PASS	Generated, parsed, rendered, visually inspected

10 / SECURITY AND LIMITATIONS

Security and limitations

QuoteLoop sends no data outside the browser. Text, amount, probability, status, and date inputs are validated; displayed user text is HTML-escaped. It requires no credentials and encourages non-identifying aliases. Device-local data is unencrypted and disappears when browser storage is cleared. Probability is a manual estimate, not a revenue guarantee. The MVP has no email automation, contact database, team accounts, or CRM synchronization.

GO TO MARKET

Make follow-up revenue visible

11 / PRICING AND REVENUE MODEL

Pricing and revenue model

Charge KRW 17,000 per business per month, including local use and updates. A single recovered small service quote can cover many months. The MVP itself has no hosting or paid-service dependency; a future hosted tier would add encrypted sync and multiple seats.

12 / FIRST CUSTOMER ACQUISITION

First customer acquisition

Recruit the first fifteen businesses from local photography, design, cleaning, and repair communities. Import only their five most recent open quotes, run a two-week follow-up sprint, and compare overdue count and won value. Convert with the concrete result of recovered quotes rather than generic productivity claims.

13 / IMPROVEMENT PLAN

Improvement plan

Priorities after validating repeated use:

- JSON backup and restore for device migration.
- Reusable service templates and default probability bands.
- Calendar reminders without storing customer contact details.
- Private encrypted sync and role-based team access only after demand is proven.

PRODUCT BOUNDARY

QuoteLoop should remain a focused follow-up control surface. It should not become an unprotected contact database, send messages without review, or claim that probability-weighted value is guaranteed revenue.

ASSESSMENT

Overall evaluation

14 / OVERALL SCORE

Overall score

Six dimensions are scored out of 10. A higher maintenance score means easier maintenance.

Dimension	Score	Rationale
Customer problem strength	8/10	Missed follow-ups directly delay or lose service revenue.
One-day completeness	9/10	The register, prioritize, total, and close loop is browser-tested.
Sales potential	8/10	Recovering one quote gives a clear monthly subscription value case.
Maintenance difficulty	9/10	Zero runtime dependencies and no backend keep maintenance light.
Differentiation	7/10	Urgency plus weighted value is useful, though CRM tools overlap.
Scalability	8/10	Templates, reminders, encrypted sync, and seats offer expansion paths.

OVERALL

8.2 / 10**Proceed to a fifteen-business follow-up sprint.**

Verdict: technically complete and visually polished for a business MVP. The next decisive evidence is whether overdue follow-ups fall and won revenue rises during a two-week customer trial.
