

SYSTEM FOUNDRY / PERSONAL TOOL 001

PackWise

A local-first packing checklist with live baggage-weight control.

STATUS	PASS	PRICE	KRW 9,900
--------	------	-------	-----------

01 Project Overview

PackWise combines packing completeness and luggage-weight planning in one offline-capable browser interface. Users can check items, monitor remaining allowance, and keep a portable JSON backup without creating an account.

Project ID	2026-08-02-0901-packwise
Delivery	Static app, tests, Dockerfile, screenshot, PDF report
Default proof	5.38 kg packed plan, 4.62 kg remaining, 59% progress
Data policy	Browser-only localStorage; no external request

02 Target Customer

Independent travelers, students, families, and carry-on-first passengers who prepare with notes or spreadsheets and must remain within an airline allowance.

03 Problem Solved

A checklist answers whether an item was packed, while a scale answers only the final total. Travelers often discover overweight baggage too late. PackWise unifies both decisions before departure.

04 Core Features

1. Packing checklist	Item state, quantity, category, and overall completion progress.
2. Weight guard	Live total, remaining allowance, near-limit state, and overweight warning.
3. Local backup	Automatic local save plus a versioned JSON download for portability.

05 How to Use

- Run `python3 -m http.server 8080 -d app` and open `localhost:8080`.
- Set the trip name and baggage allowance supplied by the traveler.
- Add item quantities and approximate unit weights, then check items as they are packed.
- Export the plan as JSON when a backup or device transfer is needed.

06 System Architecture

INPUT	VALIDATION	STATE	OUTPUT
HTML form	packing.js bounds	Browser localStorage	Checklist, bars, JSON

07 Technology

Frontend	Semantic HTML, responsive CSS, JavaScript ES modules
Logic	Pure validation, summary, serialization, and parsing functions
Tests	Node.js built-in test runner; zero runtime package dependency
Deployment	Static hosting or included Python Alpine Docker image

08 Validated Execution Screen

Captured from a real Chromium session after HTTP 200 and exact DOM assertions for total weight, remaining allowance, packed units, and progress.

09 Test Results

CHECK	STATUS	EVIDENCE
Dependency install	PASS	npm install completed; zero runtime dependencies
Application start	PASS	README command returned HTTP 200
Core behavior	PASS	5.38 kg, 4.62 kg remaining, 10/17, 59% asserted in Chromium
Automated tests	PASS	6 passed, 0 failed
Secret scan	PASS	No credential pattern or .env file
PDF output	PASS	Generated, reopened, text-checked, and visually rendered

10 Security and Limitations

Security	No backend, account, analytics, remote storage, or network API. Names and numeric ranges are validated.
Baggage rules	The user enters the allowance. The tool does not claim current airline-specific rules or restricted-item guidance.
Weight accuracy	Results depend on the user's approximate item weights and should be confirmed with a physical scale.
Browser storage	Clearing site data removes the local plan unless a JSON backup was exported.

11 Pricing and Revenue Model

Launch	KRW 9,900 one-time purchase for the downloadable local-first tool
Upgrade	KRW 3,900/month for reusable templates, multi-bag planning, and device sync
Value	Avoiding one repack or overweight fee can exceed the purchase price.

12 First Customer Acquisition

- Recruit 15 beta users from travel-planning and carry-on communities.
- Offer a free pre-trip packing audit and capture completion-time feedback.
- Publish a printable weekend-packing template that opens directly in PackWise.
- Sell the validated version as a low-cost digital travel utility.

13 Improvement Plan

Next 1	Multiple bags with per-bag limits and drag-and-drop item assignment
Next 2	Reusable templates by trip type and duration
Next 3	Optional device sync with end-to-end encrypted plan data
Next 4	Accessible print layout and shared family checklist

14 Overall Evaluation

FACTOR	/10	RATIONALE
Customer problem strength	7.8	Late overweight discovery creates direct cost and packing stress.
One-day completeness	9.1	All three features, responsive UI, tests, Docker, screenshot, and report are complete.
Sales potential	6.9	Low price and obvious utility; free checklist competition is significant.
Maintenance ease	9.3	No backend or external API; pure logic is isolated and tested.
Differentiation	7.2	Checklist progress and weight allowance are combined in one local tool.
Scalability	7.6	Multi-bag, templates, sharing, and optional sync form a clear upgrade path.

OVERALL SCORE

8.0 / 10

Verdict: A polished, low-maintenance personal utility ready for paid beta testing. Its strongest commercial path is template-driven travel preparation rather than airline-rule aggregation.
